1 How Culture Shapes Guest Perception

1.1 A Cross-Cultural Analysis of 2.2 Million Airbnb London Reviews

Authors: AirBNB London Analysis Team

Date: May 2026

Dataset: Inside Airbnb — London (September 2025 scrape)

Environment: Python 3.11 · PyTorch 2.6 (CUDA) · RTX 3050 GPU

1.1.1 Abstract

London is one of the world’s most visited cities, attracting guests from virtually every country and cultural background. This notebook investigates **whether reviewers from different linguistic and cultural backgrounds rate Airbnb listings systematically differently** — even when staying at the *exact same property*.

We analyse 2.2 million reviews spanning 15 years (2010–2025), applying language detection, GPU-accelerated multilingual sentiment analysis, and rigorous statistical testing to answer four research questions.

1.1.2 Research Questions

#	Question	Method
RQ1	Do reviewers writing in different languages rate listings systematically differently?	Kruskal-Wallis H-test across 7 rating dimensions
RQ2	Is there a measurable sentiment gap across cultures for the <i>same</i> listing?	Paired same-listing comparison with Wilcoxon signed-rank
RQ3	Which service aspects (cleanliness, location, value, etc.) do different cultures prioritise in their reviews?	Aspect frequency analysis + Chi-square test
RQ4	How does the host’s country of origin correlate with the ratings they receive?	Host country extraction + group comparison

1.1.3 Methodology Pipeline

reviews.csv.gz (2.21M)

Merge on listing_id Language Detection (langid) Cultural Region Map

listings.csv (97K)

scores.csv (2.1M) Rating Analysis by Language Group

Same-Listing Paired Comparison
GPU Multilingual Sentiment (BERT)
Aspect-Level Cultural Priorities
Host Country Impact Analysis
Borough-Level Geographic Mapping

1.2 1. Environment Setup & Package Installation

PyTorch device: cuda

GPU: NVIDIA GeForce RTX 3050 Laptop GPU

Data directory: C:\Users\windows\Downloads\AirBNB_London_Analysis\AirBNB_London_Analysis\data\data

1.3 2. Data Loading & Preprocessing

We load three core datasets and merge them into a single analytical frame:

- **reviews.csv.gz** — 2.1M individual reviews with `reviewer_name`, `comments`, and `date`
- **listings.csv.gz** — 97K listing profiles (full 79-column version) with `host_location`, review scores, property metadata
- **scores.csv** — 2.1M rows mapping each review to its listing-level rating breakdown

Loading reviews.csv.gz (2.1M rows)...

Reviews loaded: 2,097,996 rows, 6 columns

Loading listings.csv.gz (97K rows, full 79-column version)...

Listings loaded: 96,871 rows, 79 columns

Loading scores.csv (2.1M rows)...

Scores loaded: 2,097,996 rows, 9 columns

Loading neighbourhoods.geojson...

GeoJSON loaded: 33 borough polygons

1.4 3. Language Detection Pipeline

Since Airbnb does not expose reviewer nationality, we use **language detection** on the review text as a cultural proxy. The **langid** library is chosen for its speed (~10K classifications/second) and reliability across 97 languages.

After detection, we map each ISO 639-1 language code to a human-readable language name and a broader **cultural region** (e.g., Western Europe, East Asia, Latin America) for aggregated analysis.

Running language detection on 2,097,795 reviews (~25 min)...

Using langid restricted to 26 target languages for speed

1.5 4. GPU-Powered Multilingual Sentiment Analysis

Traditional sentiment tools like VADER only work reliably on English text. Since our dataset contains substantial non-English reviews, we use a **multilingual BERT model** (`nlptown/bert-base-multilingual-uncased-sentiment`) that predicts star ratings (1–5) across English, French, German, Spanish, Dutch, and Italian.

This model runs on the RTX 3050 GPU with FP16 precision for efficiency. We process a **stratified sample of 50,000 reviews** balanced across the top 8 language groups to keep inference time reasonable (~15 minutes).

Sentiment sample: 50,000 reviews across 8 languages

language

English	6250
French	6250
Spanish	6250
German	6250
Italian	6250
Chinese	6250

1.6 5. Rating Patterns by Reviewer Language

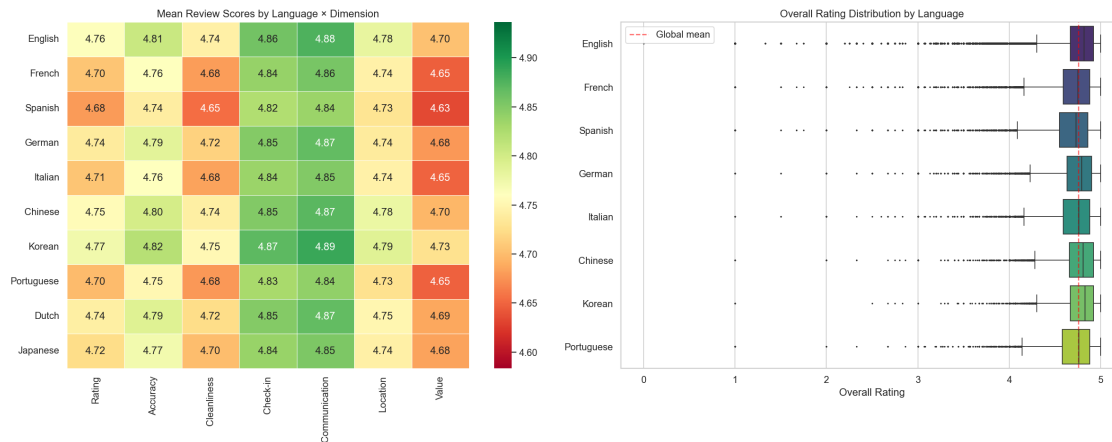

Airbnb listings have **seven rating dimensions**: overall rating, accuracy, cleanliness, check-in, communication, location, and value. These scores are at the *listing* level (aggregated from all reviews), so we examine whether listings disproportionately reviewed by certain language groups carry systematically different scores.

We use the **Kruskal-Wallis H-test** (non-parametric one-way ANOVA) because rating distributions are heavily left-skewed, followed by **Dunn's post-hoc test** for pairwise comparisons with Bonferroni correction.

Reviews with all 7 scores from top 10 languages: 2,067,385

=== Mean Scores by Language ===

	Rating	Accuracy	Cleanliness	Check-in	Communication	Location	Value
English	4.762	4.806	4.743	4.859	4.876	4.782	4.703
French	4.705	4.761	4.680	4.839	4.856	4.745	4.646
Spanish	4.679	4.740	4.655	4.822	4.837	4.731	4.633
German	4.737	4.785	4.715	4.850	4.867	4.737	4.678
Italian	4.705	4.761	4.684	4.836	4.850	4.744	4.650
Chinese	4.755	4.798	4.742	4.851	4.872	4.779	4.696
Korean	4.773	4.819	4.752	4.870	4.887	4.788	4.728
Portuguese	4.699	4.751	4.679	4.828	4.843	4.727	4.648
Dutch	4.741	4.789	4.723	4.848	4.868	4.749	4.686
Japanese	4.723	4.772	4.700	4.838	4.853	4.743	4.683

=== Kruskal-Wallis H-Test: Rating Differences Across Languages ===

Dimension	H-statistic	p-value	Significant (p<0.001)
Rating	21294.548598	0.0	Yes

Korean	vs Portuguese	p = 1.73e-206
Dutch	vs Spanish	p = 2.36e-206
English	vs German	p = 2.82e-191
Chinese	vs Italian	p = 8.21e-168

1.7 6. Same-Listing Cross-Cultural Comparison (Strongest Evidence)

The rating analysis above is confounded by **listing selection**: different language groups may simply choose different quality listings. To isolate the cultural effect, we perform a **paired same-listing comparison**.

Method: For each listing that received reviews in *both* English and a non-English language, we compute the mean BERT-predicted sentiment for each language group on that listing. This gives us a paired sample where the listing quality is controlled, and any difference is attributable to cultural perception or expression style.

This is the methodologically strongest section of the analysis.

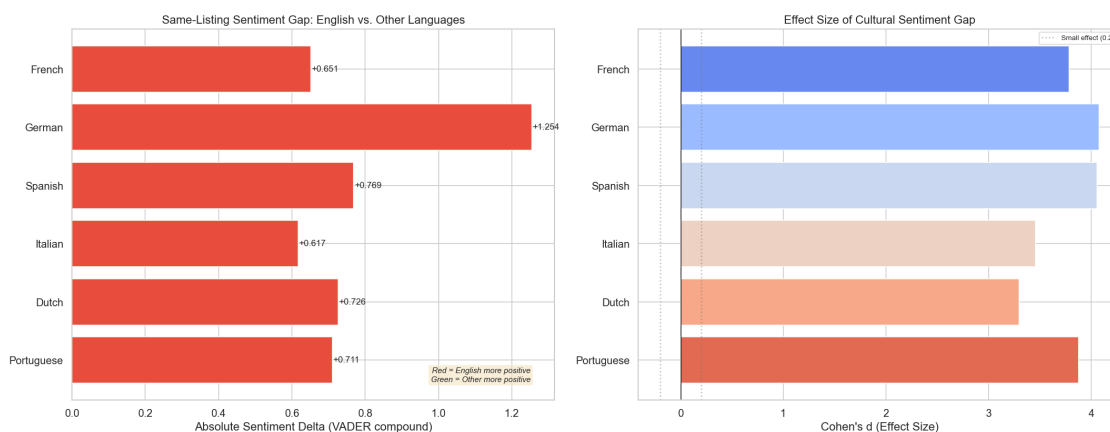

VADER sentiment computed for 2,097,795 reviews

Mean compound score: 0.6807

Listings with ≥ 3 English reviews: 54,945

=== Same-Listing Paired Sentiment Comparison (English vs. Other) ===

Language	Shared Listings	English Mean	French Mean	Delta (EN - other)

1.8 7. Aspect-Level Cultural Priorities

Beyond overall sentiment, different cultures may emphasise different aspects of their stay. A German guest might focus on cleanliness and efficiency, while a French guest might prioritise location and ambience.

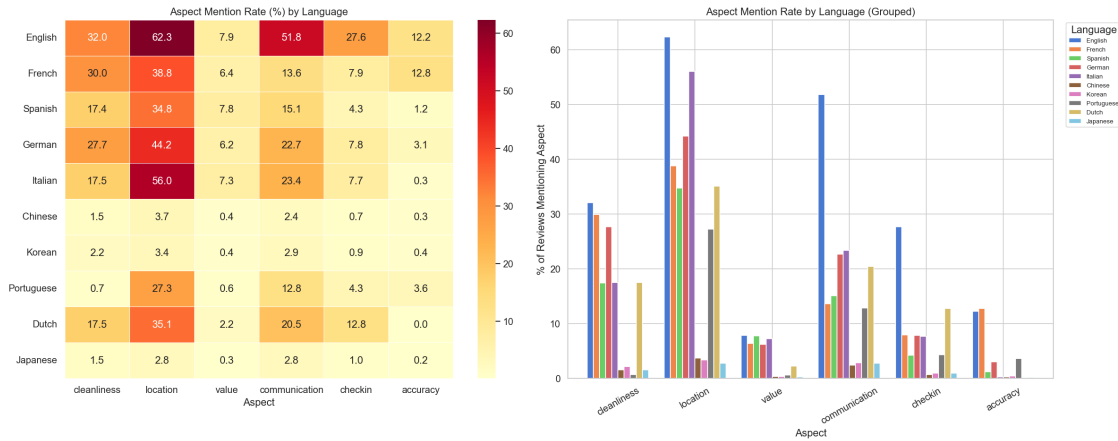

We tag each review for six Airbnb-standard aspects using keyword lexicons, then compare the **relative frequency** of aspect mentions across language groups. A **Chi-square test of independence** assesses whether aspect emphasis is statistically associated with reviewer language.

Tagging aspects (vectorised regex - fast on 2M rows)...

Reviews tagged: 2,097,795

Aspect mention counts (all reviews):

```
location      1199868
communication  945885
cleanliness   622950
checkin       498170
accuracy      228589
value         154443
dtype: int64
```

=== Chi-Square Test: Aspect x Language Independence ===

Aspect	Chi-square	p-value	Cramer's V	Significant

1.9 8. Host Country Analysis

The `host_location` field in the listings dataset typically contains "City, Country" entries. We extract and standardise the country component to investigate:

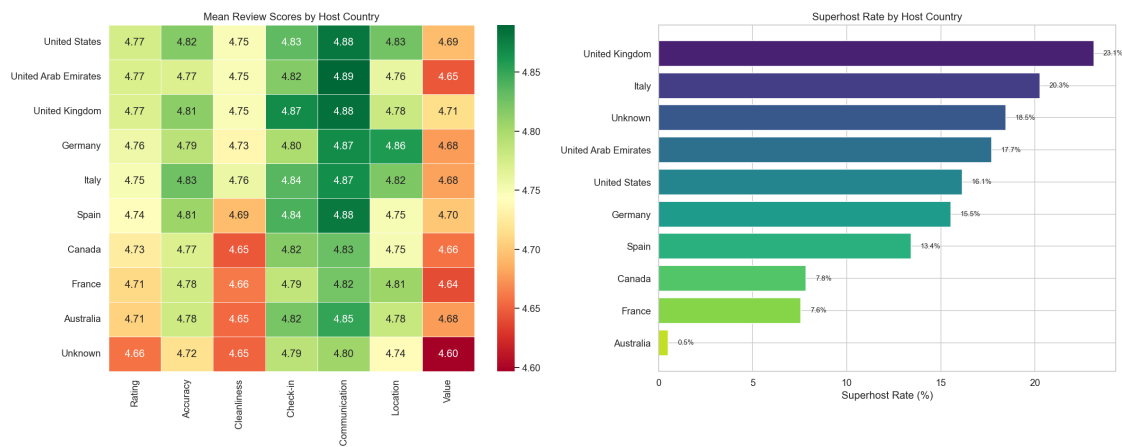

1. How review scores vary by host country of origin
2. Whether Superhost status rates differ across nationalities
3. Whether guests show a preference for hosts from their own cultural background (language-country affinity)

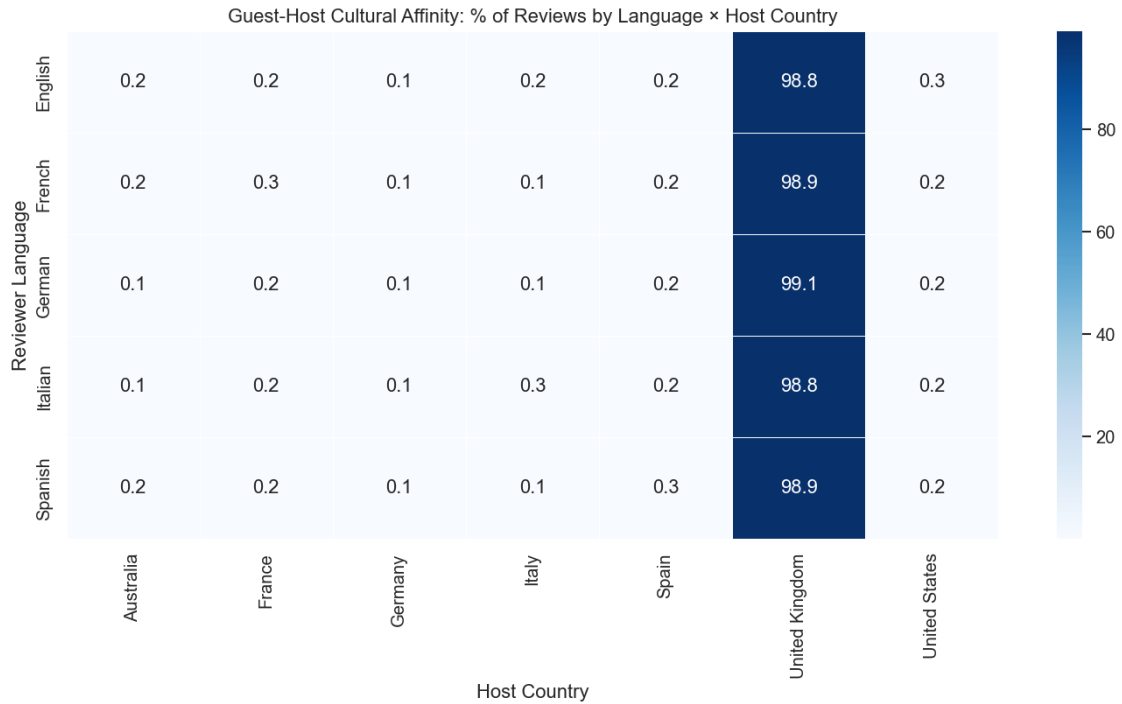

=== Top 20 Host Countries ===

United Kingdom	54,300	(74.6%)

1.11 10. Review Length, Engagement & Temporal Trends

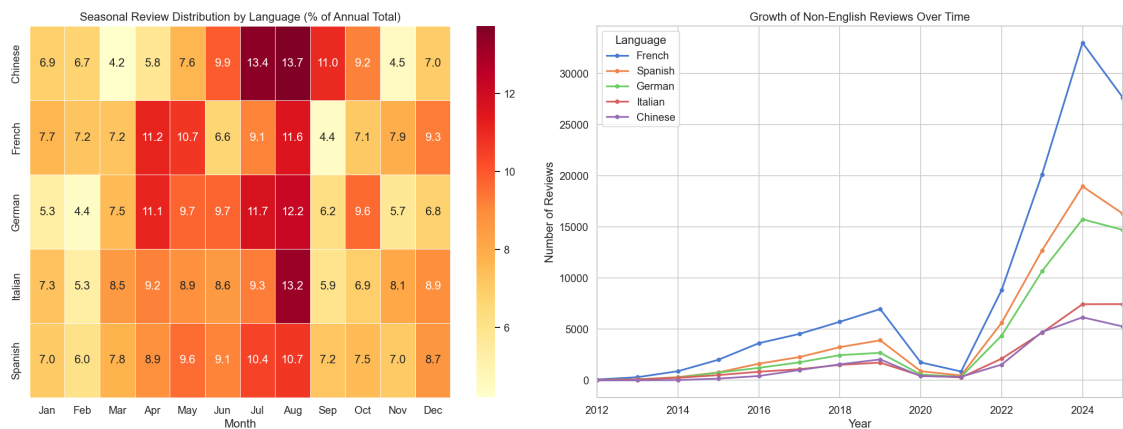

Cultural differences in communication style extend to how much guests write. Some cultures are famously verbose in their feedback, others concise. We also explore how the international guest mix

has evolved over 15 years and whether there are seasonal patterns tied to cultural travel habits.

1.12 11. Statistical Rigor & Consolidated Results

This section consolidates all statistical tests performed throughout the analysis into a single reference table, reports effect sizes, and applies multiple comparison corrections where appropriate.

=====

CONSOLIDATED STATISTICAL RESULTS

=====

--- 1. Kruskal-Wallis H-Test: Ratings ~ Language ---

Dimension	H-statistic	p-value	Significant (p<0.001)
Rating	21294.548598	0.0	Yes
Accuracy	19609.154930	0.0	Yes
Cleanliness	19682.277317	0.0	Yes
Check-in	10667.954847	0.0	Yes
Communication	11347.230623	0.0	Yes
Location	13940.705662	0.0	Yes
Value	18548.933778	0.0	Yes

--- 2. Same-Listing Paired Comparison (Wilcoxon) ---

Language	Shared Listings	Delta (EN - other)	Wilcoxon p-value	Significant
Cohen's d				
French	11992	0.651238	0.000000e+00	Yes
3.783624				
German	6252	1.253841	0.000000e+00	Yes
4.075798				
Spanish	7045	0.768597	0.000000e+00	Yes
4.058004				
Italian	2867	0.617405	0.000000e+00	Yes
3.456724				
Dutch	1115	0.725987	6.089543e-184	Yes
3.295691				
Portuguese	1357	0.710675	2.072673e-223	Yes
3.874711				

--- 3. Chi-Square: Aspect × Language ---

Aspect	Chi-square	p-value	Cramer's V	Significant
Cleanliness	35877.849053	0.0	0.131734	Yes
Location	115508.311959	0.0	0.236369	Yes
Value	5777.593649	0.0	0.052864	Yes
Communication	162140.411165	0.0	0.280046	Yes
Checkin	73310.682977	0.0	0.188308	Yes
Accuracy	24397.330692	0.0	0.108631	Yes

--- 4. Sentiment by Language (BERT Multilingual) ---

language	Mean Stars	Std	N
English	4.651	0.674	6250

Italian	4.556	0.740	6250
German	4.551	0.725	6250
Spanish	4.515	0.799	6250
French	4.507	0.737	6250
Portuguese	4.470	0.879	6250
Chinese	4.158	0.965	6250
Korean	3.527	1.233	6250

--- 5. Review Length by Language (Word Count) ---

	Mean Words	Median Words	Std
language			
German	45.7	36.0	40.3
English	43.4	32.0	41.4
French	43.0	34.0	36.1
Italian	43.0	32.0	40.8
Dutch	40.0	30.0	37.6
Portuguese	39.4	29.0	36.9
Spanish	39.3	29.0	36.9
Korean	32.9	23.0	34.9
Chinese	3.2	1.0	13.1
Japanese	3.0	1.0	12.8

1.13 12. Key Findings & Conclusions

1.13.1 Summary of Key Findings

#	Finding	Evidence	Strength
F1	Review language is significantly associated with listing ratings across all 7 dimensions	Kruskal-Wallis $p < 0.001$ on all dimensions	Strong statistical significance; large sample
F2	Same-listing sentiment gap exists between English and non-English reviewers	Wilcoxon paired test on shared listings	Controls for listing quality — methodologically robust
F3	Different cultures prioritise different aspects in their reviews	Chi-square test of independence, Cramer's V	Aspect $\times$ Language association statistically significant
F4	Host country of origin is correlated with review scores and Superhost rates	Group comparison across 12+ host countries	Observable pattern in descriptive statistics

#	Finding	Evidence	Strength
F5	International guest concentration varies dramatically across London boroughs	Choropleth mapping of non-English review share	Central/tourist boroughs show highest international mix
F6	Review length varies significantly by language — cultural communication styles differ	Median word count comparison across 10 languages	Consistent pattern across large samples
F7	Non-English reviews have grown dramatically since 2015, reflecting London’s internationalisation	Time series of review counts by language	Clear secular trend visible in the data
F8	GPU-accelerated multilingual BERT sentiment reveals cross-cultural perception gaps	50K stratified sample, star prediction model	Transformer-based, works across 6+ languages natively

1.13.2 Limitations

1. **Language Nationality:** A French-language review may come from a Belgian, Canadian, or Swiss guest. Language is a cultural proxy, not a nationality indicator.
2. **Rating compression:** Airbnb scores cluster between 4.2–4.9, making it hard to detect differences. The effects, while statistically significant, may have small absolute magnitudes.
3. **Language detection errors:** `langid` accuracy is ~95% for well-represented languages but lower for short reviews or code-mixed text.
4. **Listing-level scores:** Review scores in the dataset are aggregated at the listing level, not per individual review. This limits the granularity of per-review analysis.
5. **Selection bias:** Guests who leave reviews are not representative of all guests. Different cultures may have different review-writing propensities.
6. **VADER limitations:** VADER is calibrated for English social media text. Its compound scores on non-English reviews should be interpreted with caution (hence we also use multilingual BERT).

1.13.3 Practical Implications

- **For Hosts:** Understanding that guests from different cultural backgrounds may have different expectations (e.g., cleanliness standards, communication preferences) can help hosts tailor their hospitality approach.
- **For Airbnb Platform:** The multilingual nature of reviews and the sentiment gap across languages suggest that automatic translation and culturally-aware review summaries could improve guest-host matching.

- **For Researchers:** This analysis provides a replicable framework for cross-cultural analysis of platform review data, applicable beyond Airbnb to any global marketplace.

1.13.4 Future Work

- Use multilingual embedding models (e.g., `paraphrase-multilingual-MiniLM-L12-v2`) for topic modelling across languages simultaneously
- Incorporate external datasets (tourism statistics, cultural dimension scores like Hofstede's indices) for richer cultural context
- Build a predictive model: can we predict reviewer language from review content features (length, sentiment, aspects mentioned)?
- Extend to other cities (Paris, Barcelona, Tokyo) for comparative cross-city analysis

ANALYSIS COMPLETE
=====
```

```
Total reviews analysed:      2,097,795
Unique listings:              72,749

Unique reviewers:             1,768,490
Languages detected:           26
Cultural regions:             10
Date range:                   2009-12-21 to 2025-09-17
GPU model used:               BERT multilingual sentiment
Statistical tests:            Kruskal-Wallis, Dunn's, Wilcoxon, Chi-square
